Texte (adapted from VOANews "Returning Migrants Often Bring Their Health Problems Home", 05 July 2011 :

This is **the VOA Special English Health Report**.

Everyone knows **life for refugees and migrant workers** can be difficult, dangerous and even deadly. But what happens when they return home? One of **the biggest problems for migrants** is getting health care as they travel and live in a new place. As a result, they often bring their medical problems home with them.

A new report looks at this situation. The report is from **specialists at the International Organization for Migration in Geneva**, Switzerland.

One of those authors was Haley West. She says migrant workers who get injured on the job may not be able to get treatment in the country where they are working. That lack of access to medical care means they have to deal with medical problems when they rejoin their family.

HALEY WEST: "So when they return back home, they've got **an occupational health issue** that wasn't addressed in the country where they were working. And now, the diagnosis has probably been delayed. So that delay in diagnosis oftentimes leads to **worse health issues** that could have potentially been preventable if they had been given the access in the country in which they were working."
